

One Account, Five Students

Feedback on the Future Founders camp and its StartPad integration — what the pack gets right, and the nine gaps between where it stands and every student learning from the platform rather than five teams using it.

The camp is well designed. The integration is not yet a platform integration.

The pack is the most carefully sequenced youth programme I have read in this market, and one of its decisions — reordering what is taught so the homework unlocks in the right order — is better than anything we would have specified ourselves. What follows is not a criticism of the curriculum. It is about the difference between StartPad being present in the camp and every student learning from it.

As written, twenty to thirty students will share five to seven accounts, split ten missions between them, and be assessed on work that carries no StartPad weight at all. Most of them will leave without having personally completed a mission. That is a design outcome, not a risk — it follows from three decisions in the pack, and all three are reversible before Day 1.

5–7

Accounts for 20–30 students

Pack, Part 4: one shared team account

0%

Of the Bazaar rubric is StartPad work

Pack, Part 1: seven criteria, none of them the platform

10/15

Missions in scope; five never opened

Pack, Part 4: startpad/missions.py

Three numbers that decide the rest of this review. None of them is a judgement — each is stated in the pack or follows directly from what it states.

Say this part first, because it is the part worth keeping.

01 The sequencing decision

Solution selection and value proposition were moved to Day 2 so that missions 05 and 06 unlock before mission 08. Teaching order was bent to fit the platform rather than the reverse. That is unusual and it is correct.

02 Work first, platform second

Teams produce the artefact in class, then enter it at home. The platform records work that already exists rather than generating homework of its own. This is the right relationship and it should survive every change below.

03 The thresholds are set before the test

Day 2 requires a success threshold written in advance, and Day 3 scores the verdict against it. A published rubric visible from Day 1. A common gap column that names “threshold set after the results”. This is the evidence discipline the platform exists to teach, already in the room.

04 Six open decisions, listed rather than assumed

Naming what is unresolved is the hardest part of a programme document and the pack does it plainly. Two of the six are the subject of this review.

The one line I would not change

“Assessment adds no extra burden for students, because most evidence is a team artefact that already exists in the day's flow.” That principle is why the camp will run well. The recommendations below are written to stay inside it.

A student can finish this camp having completed two missions.

FROM THE PACK

“Each team works from one shared team account. Teams split homework missions among members, so no single student carries the load.”

Entrepreneurship Camp Learner Journey, GrowthLabs Group x Cognify Academy, September 2026 · Part 4, confirmed design decisions, and Part 1, daily rhythm

Those two sentences are individually sensible and together they produce the problem. Thirty students in six teams is five per team. Ten missions split five ways is two missions each. A student who does exactly what the pack asks will personally complete two of the platform's fifteen missions — and will have watched, rather than done, the other eight.

The certificate confirms it. A student receives it for attending five of six days and speaking in the pitch. Neither condition involves StartPad. A rational fifteen-year-old reads that correctly and lets a teammate log in.

WHAT THE CAMP MEASURES

The team's in-class deliverable, at each checkpoint

The team's Bazaar score, on seven criteria

The individual's attendance and speaking turn

The individual's exit tickets and participation

WHAT STARTPAD MEASURES

Whether a team account submitted a mission

Nothing about which student did it

Nothing that reaches the Bazaar rubric

Nothing that survives the last day

The two columns never meet. StartPad artefacts are handed to judges in advance and no rubric criterion scores them, so the platform contributes nothing to the only summative assessment in the camp.

Why this matters more here than in an adult programme

The platform's product is a personal, verifiable credential — proof that a named individual did the work. A shared team account cannot issue one, because there is no individual in it. Run as written, the camp produces six credentials for thirty students, and they are not credentials of anything a third party could check.

Ranked by how many students each one leaves out.

	GAP	WHO IT EXCLUDES	FIX OWNER
01	One shared team account	Every student but one per mission	StartPad
02	StartPad carries no assessment weight	Every student, by incentive	Camp + StartPad
03	Home access is still an open decision	Whichever students lack a device — unknown, and the ones who need this most	University
04	Missions 11–15 out of scope, with no Day 7	Every student, after the Bazaar	StartPad
05	Seven of ten mission names do not match the product	Every student, on Day 1 night	Camp pack
06	Delivery language undecided	Unknown; likely the least confident readers	University + StartPad
07	Ages 13–17 against a platform written for 18–30	Every student, in tone and in the evaluator	StartPad
08	No facilitator view of platform progress	Facilitators, and so every student	StartPad
09	Nothing is returned to the student after Day 6	Every student	StartPad

Gap 05, in detail, because it is the cheapest to fix

The pack names ten missions. Seven of those names are not what a student will see when they open the platform that evening. A thirteen-year-old told to complete “03 Opportunity Prioritisation” will open StartPad and find “Importance/Frequency Matrix”. This is a fifteen-minute fix and it will otherwise generate support questions on the first night, which is the worst possible night.

#	WHAT THE STUDENT SEES IN STARTPAD	WHAT THE PACK CALLS IT
01	Problem Analysis	Problem Analysis — matches
02	Problem Definition	Problem Definition — matches
03	Importance/Frequency Matrix	Opportunity Prioritisation
04	Problem Statements	Testable Problem Statement
05	Idea Selection	Solution Selection
06	Idea Description	Value Proposition & Assumptions
07	Solution Hypothesis Test	First Assumption Test
08	Business Model Canvas	Business Model Canvas — matches
09	Build Prototype	Build a Learning Prototype
10	Solution Hypothesis Test (Prototype)	Prototype User Test

Checked against the platform's own mission list rather than from memory. Note also that missions 07 and 10 carry nearly the same name in the product — a naming problem on our side, not the pack's, and one the camp's clearer names would actually solve. The right fix is for the product to adopt the pack's names, not the other way round.

The camp stops at ten. The credential lives at fifteen.

Missions the camp reaches, and the five it does not. Service Selection, Market Validation, Build MVP, Product-Market Fit Test and Go to Market are where the platform's own value sits — and where a student is left standing on the evening of Day 6, with no route named.

This is defensible for a six-day camp and it should not be solved by cramming five more missions into two weeks. It should be solved by deciding what Day 7 is. At present the pack sends a report to the university within a week and sends nothing at all to the student.

 WHERE STUDENTS ARE ON DAY 7	 WHERE THE PACK LEAVES THEM	 WHERE THEY COULD BE
Ten of fifteen missions, on an account they share with four other people, with no personal record.	A certificate for attendance and a paragraph in a report the university reads.	A personal account carrying their own completed missions, and a named next step into missions 11–15.

The third state costs one email and a migration script. It is the difference between a camp that used a platform and a platform that gained thirty founders.

Three changes carry seven of the nine gaps.

Change 01

Individual accounts inside a team

Every student gets a personal login. The team keeps a shared workspace, and each mission records which student submitted it.

Change 02

One rubric criterion, worth ten per cent

“Evidence trail” on the Bazaar rubric, scored from the platform artefacts the judges already receive in advance.

Change 03

A Day 7 email to every student

Their own completed missions, their own account, and missions 11–15 unlocked, with the first one named.

None of these adds classroom time, which is the constraint the pack is rightly protective of.

Three changes, in the order they should be made. The first is the one that makes the other two mean anything.

Change 01 — individual accounts inside a team workspace

This is ours to build and it is the whole review. A team workspace that holds the shared artefact, with a personal login per student and an attribution line on every submission, keeps everything the pack wants — teams split the load, nobody carries it alone — while making the individual visible. The facilitator's homework check then shows who has done nothing, which is currently invisible by design.

Change 02 — give the platform ten per cent of the rubric

Not for our benefit. A rubric that scores the evidence trail rewards exactly the discipline the camp already teaches on Day 2 and asks about on Day 3, and it is the only criterion of the seven that cannot be produced on the last night. Judges already receive the artefacts; at present they are given material they are not asked to score.

CRITERION	WEIGHT NOW	PROPOSED	WHY
Problem and customer evidence	20%	20%	Unchanged.
Solution and prototype	20%	20%	Unchanged.
Business and finance logic	15%	15%	Unchanged.
Brand and booth	10%	10%	Unchanged.
Pitch delivery	15%	10%	The most coachable criterion and the most rehearsed; five points move well.
Q&A	10%	10%	Unchanged.
Teamwork	10%	5%	Already measured daily in the observation log, so it is double counted.
Evidence trail	—	10%	Scored from the StartPad artefacts judges already hold. Cannot be produced the night before.

Change 03 — decide what Day 7 is

The post-camp report goes to the university within a week. A student gets a certificate and nothing else. One email, sent the same week, that hands each student their own account with their own missions on it, and names the next mission, converts a two-week camp into an entry point. Without it the camp is a good camp and the platform was a homework system.

Home access and language are on the university's list. They should be on ours.

FROM THE PACK

“Do all students have a device and internet at home? If not, the university could offer a supervised 30-minute homework slot after class.”

Entrepreneurship Camp Learner Journey, GrowthLabs Group x Cognify Academy, September 2026 · Part 1, open decisions

This is listed as a question for the university and it is really a product question. If the whole StartPad integration is homework-only and homework requires a device at home, then the students without one are excluded from the platform entirely — and they are, reliably, the students the platform was built for. The supervised slot is the right answer and it should be the default rather than the fallback, with one device per team as the Day 1 kit list already assumes.

Language is the same shape of problem. The pack says StartPad already supports Arabic, and asks whether the camp runs in English. If the classroom is one language and the platform is the other, every student translates their own work at nine in the evening, alone, at thirteen. My recommendation is that both run in Arabic, with English terms kept where the industry uses them, and that the decision is made before the workbook is printed rather than after.

Age, honestly

The platform's stated audience is eighteen to thirty. These students are thirteen to seventeen. Missions 07 and 10 ask for tests with real people, which the pack correctly wraps in safeguarding rules, and the AI evaluator has never been calibrated on a fourteen-year-old's answer. Nothing here blocks the camp, and the evaluator's tone is worth one deliberate pass before Day 1 — unsoftened truth is our house style with adults and needs a different setting for a child.

If only one thing changes, make it the accounts.

- ☐ **Individual logins inside a team workspace, with per-mission attribution**
Ours. This is the gap; everything else is downstream of it.

- ☐ **The pack's mission names adopted in the product**
Ours, and a fifteen-minute change. The pack's names are better than the product's.

- ☐ **One rubric criterion for the evidence trail, at ten per cent**
Camp, with our input. Judges already hold the material.

- ☐ **A supervised homework slot as the default, not the fallback**
University. Removes the device question from the critical path.

- ☐ **Both the camp and the platform in the same language, decided before printing**
University and us, together, before the workbook goes to print.

- ☐ **An evaluator tone pass for ages 13–17**
Ours. One afternoon, before Day 1.

- ☐ **A facilitator view showing per-student progress**
Ours. The homework check currently happens by looking at a phone.

- ☐ **A Day 7 email: their account, their missions, the next one named**
Ours. Turns a camp into an entry point.

The measure I would hold us to

Not missions completed and not XP earned — both are already in the post-camp report and both are team numbers. The measure is how many of the twenty to thirty students hold a personal account with at least one mission they completed themselves, ninety days after the Bazaar. Today that number would be zero, and nothing in the pack is at fault for that. It is ours.

All figures in this review are taken from the design pack or checked against the platform's own mission list. The five-per-team and two-missions-per-student figures are arithmetic on the pack's stated ranges of 20–30 students and 5–7 teams, not numbers the pack gives.

StartPad tells you the truth about whether you are ready, gets you ready, and gives you the proof.

What it is

A founder-readiness platform for Egypt and the wider MENA region. It takes a young person who has an idea and no company, moves them through fifteen structured missions, and turns them into someone the ecosystem will take seriously — then issues verifiable proof of that.

It is not a course platform, not an education brand and not a youth club. Nothing here is graded. Every mission ends in an artefact you own.

Three moves, always in this order

TRUTH **Where you actually stand**

Measured against what programmes actually ask for, stated plainly, before any encouragement.

READINESS **Fifteen structured missions**

They close the specific gaps the assessment found, in the order that matters. A route, not a curriculum.

PROOF **A verifiable credential**

The ecosystem can check it without asking you. You apply with a file, not a hope.

On your idea

StartPad earns when a founder gets into somewhere — an accelerator, a programme, a room. Taking a founder's idea would end that. Work submitted to a mission is sealed and timestamped to the person who submitted it, and the seal is the product.

Nothing in this document asks you to give anything up to use it. It is yours to fill in, print, and hand to whoever needs to see it.

startpad.me

Start with the readiness assessment. It is free and it takes about twenty minutes.
