Angelsta

The same fund can be 1.5x and 1.2x.

Both numbers are correct.

The setup.

Limited partners (LPs) paid in $10M. $8M went into companies. **$2M went to fees and expenses.**

MOIC on the deals.

The companies are now worth $12M. $12M ÷ $8M invested.

1.5x

TVPI on the fund.

TVPI divides by everything paid in, fees included. $12M ÷ $10M, before carry.

1.2x

ILLUSTRATIVE EXAMPLE

The split.

Nothing has been distributed yet, so all of TVPI is residual value.

DPI		RVPI		TVPI
0.0x	+	1.2x	=	1.2x

Neither number is wrong.

Ask which denominator.
