

Two Ideas, One Fortnight

Feedback on the Future Founders camp now that StartPad is open for a month and every student has their own account. The arrangement is right. It creates one collision that has to be resolved before Day 1, and it makes the second half of the month the most valuable part of the programme.

The month is the programme. The camp is its first two weeks.

Opening the platform for a month and giving every student their own account is better than what the design pack describes, and it removes the concern I would otherwise have led with: under the pack, twenty to thirty students share five to seven team accounts and split ten missions between them, with no personal record of anything. That is gone. Everything below follows from what replaces it.

1 account

Per student, not per team

Delivery plan, September 2026

30 days

Of access; the camp uses 6 of them

Delivery plan · pack, Part 1

2 ideas

A team venture and a personal one, in the same fortnight

The collision this brief is about

What changed, and what it created. The first two figures are the improvement. The third is the consequence nobody has decided about yet.

The collision

The camp is team-based: students form teams on Day 1, carry one venture through six modules, and pitch it at the Bazaar. The platform is now personal: each student has an account and can execute their own idea. Those are two different ventures competing for the same two weeks, and a fourteen-year-old will not resolve it on their own — they will do whichever one is graded, which is the team's.

The pack's elegance depends on the two being the same thing — teams produce the artefact in class and enter that work at home, so the platform records work that already exists instead of generating more. If the account holds a different idea, that elegance is gone and the homework doubles, for the age group least able to absorb it.

What I would do: same venture for six days, own idea for the rest of the month

THE MONTH

Camp, week 1		week 1
Days 1–3. Personal accounts; every student logs the team's venture themselves. Missions 01–08.		
Camp, week 2		week 2
Days 4–6 and the Bazaar. Missions 09–10 and catch-up.		
Open weeks 3–4		weeks 3–4
Either continue the team venture into missions 11–15, or start a personal idea at mission 01. The student chooses.		

The month, as I would run it. One venture while the camp is running, because the camp's design depends on it; the choice opens the day after the Bazaar, when there is time to take it.

This keeps every benefit of the personal account — own record, own submissions, own credential — while class and homework stay the same piece of work. It also gives the second half of the month a job. At present the fortnight after the Bazaar has nothing designed into it, and it is the half where a student first builds something of their own.

The sentence to put in the Day 1 onboarding

“For the next two weeks your account holds your team's venture, and you enter your own part of it. After the Bazaar the account is yours for another two weeks — carry the team's idea further, or start your own from mission one.” Said on Day 1, it removes the ambiguity for the whole month.

Six things to settle before Day 1

	WHAT	WHY IT MATTERS NOW	OWNER
01	Update Part 4 of the pack	It still states one shared team account as a confirmed decision, and facilitators run what the pack says.	Camp
02	Fix the mission names	Seven of the ten names in the pack are not what a student sees on screen — checked against the platform, not from memory. Fifteen minutes, or support questions on the first night.	StartPad
03	Give the Bazaar rubric one StartPad criterion	None of the seven criteria scores platform work, so it is worth nothing to a student's grade. Judges already hold the artefacts and are not asked to score them.	Camp
04	Make the supervised homework slot the default	Home device access is still an open question, and with individual accounts it is one device per student. The students without one are the ones this platform exists for.	University

	WHAT	WHY IT MATTERS NOW	OWNER
05	Decide the language before the workbook prints	If the classroom runs in English and the platform in Arabic, every student translates their own work alone at nine in the evening, at thirteen.	University + StartPad
06	Tone-check the evaluator for ages 13–17	Our stated audience is 18–30 and the evaluator has never been calibrated on a fourteen-year-old's answer.	StartPad

Items 02 and 06 are ours and both are small. Item 03 is the one I would argue for hardest: a criterion scoring the evidence trail rewards exactly the discipline the camp teaches on Day 2 and checks on Day 3, and it is the only thing on the rubric that cannot be produced the night before the Bazaar.

Day 31

One month of access needs a stated end, and it is a brand decision rather than a billing one. If the account locks and the student loses their submissions, we will have taught thirty young people that a platform takes your work back — the opposite of what we say on our first screen, and worse than not running the integration at all.

The account	Stays open and free at whatever mission they reached. It does not lock.
The artefacts	Stay theirs, sealed and dated. Nothing is withdrawn.
The credential	Issued for what was actually completed, however far that got.
The last email	Names the next mission. Silence is the one outcome to avoid.

The measure I would hold us to

Not missions completed and not XP — both are already in the post-camp report. The measure is how many of the students hold a personal account with at least one mission they completed themselves, ninety days after the Bazaar. The one-month, one-account decision makes that number possible; the six items above make it more than zero.

Written against the **Entrepreneurship Camp Learner Journey** pack, September 2026; figures are from it or checked against the platform's mission list. What the pack gets right is untouched: teaching order bent to fit mission order, thresholds set before tests, work produced in class first.

About StartPad. A founder-readiness platform for Egypt and the wider MENA region. It takes a young person who has an idea and no company, moves them through fifteen structured missions, and issues verifiable proof of the work. Nothing submitted to a mission is taken from the person who submitted it: it is sealed and timestamped to them, and the seal is the product.
